TYPE OF PROGRAM ADJUSTMENT

DESCRIPTION OF PROGRAM

Creation of new pay incentive programs for the Department

BENEFITS OF FUNDING PROGRAM

The Utility Department contracts high end technological services with outside vendors. These professional technological services are an increasing portion of the operation of the facilities and at times the vendors do not provide the urgency and service response that is required. The Department has over the last several years started programs to allow selective training of staff to assist and provide the technology tasks that are over and above the normal job duties. This type of work above the normal duties is recommended to be funded through a skill incentive program. This will help reduce the contract expenses, provide a better service that is more responsive and allow our employees that extend the technology skills to be compensated for work above the standard job requirements. These incentives will only go to selective staff that have demonstrated the expertise to perform the work. Decreased usage

of outside resources. Advancement opportunities for staff who work to develop skills that reduce O&M cost and a greater understanding of systems already in place providing increased reliability to plant operations are the major benefits. Anticipate reduction in contract services line item 3309 with approval.

ESTIMATE AND EXPLANATION OF NEW REVENUE

Each incentive would have a opening for one person at a time and each would be a 5% pay increase over the normal pay grade. Total cost for each would be based on topped out worker and 2080 hours per year would be \$1934.00 per employee with estimate of 10 employees in the Dept with the

CONSEQUENCES OF NOT FUNDING PROGRAM

Decreased understanding of complex systems and the need to continue to rely on outside resources. Decrease of overall plant reliability with complex systems.

POSITIONS INVOLVED IN PROGRAM IMPROVEMENT Operators and Maintance workers

TYPE OF PROGRAM ADJUSTMENT

DESCRIPTION OF PROGRAM Additional resources to Maintain new equipment and facilities of expansion to Kaw and Clinton Water Treatment Plants. New facilities include Lime Residuals Pump Station and Clinton Plant Expansion. Equipment include pumps, HVAC, valves, electrical and telemetry equipment that make these facilities operate. Phase I of Clinton Plant expansion was completed in 2002. In 2005 Phase II will be completed and the Clinton Water Treatment Plant will double in capaicity. Double the amount of equipment and instrumentation will be brought into operation which will require more preventive maintenance. The addition of the Lime Residuals Pumping Station and Feeders, ote will also have an impact on resources BENEFITS OF FUNDING PROGRAM The addition to the Maintenance Staff has become necessary for the operations division due to

plant expansions additional booster pump stations that are being utilized during the summer (Kasold & Oread); ad the Lime Residuals Improvements project will increase the Preventive Maintenance of all Plant Equipment.

ESTIMATE AND EXPLANATION OF NEW REVENUE Need Funding Level for One Peson

CONSEQUENCES OF NOT FUNDING PROGRAM

Over the past five years, the overall number of pieces of equipment that is required to maintain has increased to the point that another person is required to stay ahead of the preventive maintenance on the Plant equipment. The increased work load of 4 Maintenance Personel to Maintain 2 Water Treatment Plants, Wells and Pump Stations has increased to the point that ether projects have to be shifted around and some not being completed at all. The consequences of 9/11/01 have created the need to provide increased security at the water treatment plants, wells and water towers. Consequences to not funding: Less effective operation of the Plants and Maintenance Staff from the standpoint of not getting the tasks done. Potential to have plant problem's that create difficulty in meeting regulations

POSITIONS INVOLVED IN PROGRAM IMPROVEMENT One new Plant Manintenance Mechanic.

ESTIMATE AND EXPLANATION OF NEW REVENUE N/A
CONSEQUENCES OF NOT FUNDING PROGRAM
If this position is not provided, the Inflow and Infiltration Tech will continue to rely on assistance from field stat to install and download flow meters, inspect manholes and inspect pipeline and manhole renewal work.
Additionally, field staff will be needed to perform grease monitoirng and inspection, resulting in a decrease in staff for lift station and line maintenance operations.
